

Asset Management

From desktops, weapons, and protective gear to vehicles and radios, manually tracking thousands of operational assets used daily by agency personnel is labor-intensive and can result in errors or lost items. Using a centralized solution like Workforce Management PLUS to manage assigned agency assets increases control of costly inventory and assignment tracking.

Comprehensive Asset Information Tracking

With Workforce Management PLUS, asset details include a wide range of information such as serial, stock and bar code numbers, financial codes, and effective/expiration dates. Purchase order details, like vendor information, pricing, warranty, and returns support long-term supply requirements. Interfaces with barcode scanner devices enable quick and efficient data entry.

Control Asset Tracking In Real-Time

Track an unlimited number of asset items, including item issuances and returns by personnel, units, or work locations. Data can be imported or manually entered and edited by authorized personnel. Organize assets based on agency-defined parent-child categories and types. Associate attributes with items to control assignments to locations, groups, or owner types.

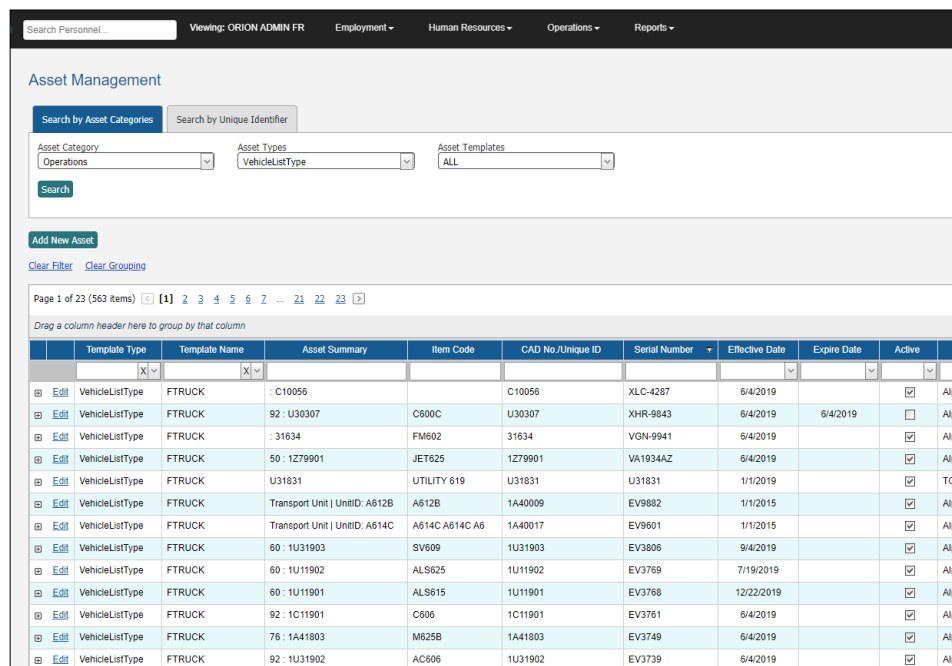

Ensure The Right Assets Are the Right Hands

Once entered, assets and/or asset groups can be assigned to employees, assignments, or locations.

Items assigned to personnel include name, date, and time stamps for auditing purposes. Automatic alerts to supervisors ensure oversight and cost control.

Increase CAD Efficiencies For Dispatchers

When integrated with public safety CAD systems for rostering purposes, CAD can be set up to automatically receive real-time updates regarding assignments and equipment capabilities -- including vehicle and radio information. Any asset placed out-of-service in Workforce Management PLUS is automatically updated in CAD and includes its replacement.

The screenshot shows the 'Asset Management' interface. At the top, there are navigation tabs: 'Search Personnel...', 'Viewing: ORION ADMIN FR', 'Employment', 'Human Resources', 'Operations', and 'Reports'. Below this is the 'Asset Management' section with search options: 'Search by Asset Categories' and 'Search by Unique Identifier'. There are three dropdown menus: 'Asset Category' (Operations), 'Asset Types' (VehicleListType), and 'Asset Templates' (ALL). A 'Search' button is present. Below the search area is an 'Add New Asset' button and 'Clear Filter' / 'Clear Grouping' links. The main area shows a table of assets with the following columns: Template Type, Template Name, Asset Summary, Item Code, CAD No./Unique ID, Serial Number, Effective Date, Expire Date, and Active. The table contains 23 rows of data, with the first row showing a truck with CAD No. C10056 and Serial Number XLC-4287.

Benefits

- » Saves time and improves tracking of issuances and returns
- » Increases inventory control
- » Improves assignment accountability
- » Increases dispatcher efficiencies in CAD systems for integrated systems

Key Features

- » View current and historical employee assignments
- » Assign assets to:
 - Employees
 - Work assignments
 - Work locations
 - Dispatched units (with CAD integrations)
- » Track an unlimited number of operational assets with:
 - Purchasing info
 - Cost data
 - Parent/child relationships
- » Associate assets with capabilities by locations or user groups
- » Search for equipment using multiple filters
- » Enter asset notes
- » Apply organization or funding assignment restrictions
- » Track out-of-service equipment assignments and replacements
- » Integrate and export asset assignments to CAD
- » Bar code technology supported
- » Audit reporting
- » Role-based access security controls

Track a wide range of asset information and setup parent/child relationships. Associate asset reference types, work locations and add notes. Record vendor information and track purchase order details.
